Conclusion: For the purpose of understanding and measuring racial discrimination, race should be viewed as a social construct that evolves over time. Despite measurement problems, data on race and ethnicity are necessary for monitoring and understanding evolving differences and trends in outcomes among groups in the U.S. population.

Exercise experts measure activity in metabolic equivalents, or METs. One MET is defined as the energy it takes to sit quietly. For the average adult, this is about one calorie per every 2.2 pounds of body weight per hour; someone who weighs 160 pounds would burn approximately 70 calories an hour while sitting or sleeping.

Research on the history of toys and their use tends to focus on western cultures, but work has also been done on North Africa and the Sahara. Puppets or dolls made of wood, clay, wax or cloth may be the earliest known toys. Archaeologists have found them in sites from Egypt, Greece and Rome, and Antonia Fraser emphasizes their universality.. Dolls can be seen as an early "educational toy ...

Reliability is a measure of the consistency of a metric or a method. Every metric or method we use, including things like methods for uncovering usability problems in an interface and expert judgment, must be assessed for reliability.. In fact, before you can establish validity, you need to establish reliability.. Here are the four most common ways of measuring reliability for any empirical ...
