Molecular mechanics uses classical mechanics to model molecular systems. The Born–Oppenheimer approximation is assumed valid and the potential energy of all systems is calculated as a function of the nuclear coordinates using force fields. Molecular mechanics can be used to study molecule systems ranging in size and complexity from small to large biological systems or material assemblies with ...

American Journal of Mechanics and Applications (AJMA) provides a forum for sharing timely and up-to-date publication of scientific research and review articles. The journal publishes original full-length research papers in all areas related to mechanics and its applications from contributors throughout the world. It also encourages contributions from the newly emerging areas such as micro ...

American Journal of Mechanics and Applications :: Science

Biomechanics is the study of the structure and function of the mechanical aspects of biological systems, at any level from whole organisms to organs, cells and cell organelles, using the methods of mechanics.

Undergraduate Study Bachelor of Science in Biological Engineering (Course 20) The Department of Biological Engineering (BE) offers an undergraduate curriculum emphasizing quantitative, engineering-based analysis, design, and synthesis in the study of modern biology from the molecular to the systems level. Completion of the curriculum leads to the Bachelor of Science in Biological Engineering ...

The International School for Advanced Studies (SISSA) was founded in 1978 and was the first institution in Italy to promote post-graduate courses leading to a Doctor Philosophiae (or PhD) degree.

Journal of Statistical Mechanics: Theory and Experiment

Daraio's lab is primarily interested in: Developing a physical understanding of how stress propagates in nonlinear, ordered and disordered solid media at length scales ranging from nanometers to meters.

Daraio Research Group at Caltech

Nonlinear Dynamics and Statistical Physics focuses on both fundamental and applied problems involving interacting many body systems. The systems of interest are typically the ones involving strongly nonlinear forces between the entities.

Department of Physics - University at Buffalo

Mechanics is an area of science concerned with the behavior of physical bodies when subjected to forces or displacements, and the subsequent effects of the bodies on their environment.
