Deep venous thrombosis (DVT) is a manifestation of venous thromboembolism (VTE). Although most DVT is occult and resolves spontaneously without complication, death from DVT-associated massive pulmonary embolism (PE) causes as many as 300,000 deaths annually in the United States. [] See the image below.

Deep Venous Thrombosis (DVT): Practice Essentials

The ankle-brachial pressure index (ABPI) or ankle-brachial index (ABI) is the ratio of the blood pressure at the ankle to the blood pressure in the upper arm (brachium). Compared to the arm, lower blood pressure in the leg suggests blocked arteries due to peripheral artery disease (PAD). The ABPI is calculated by dividing the systolic blood pressure at the ankle by the systolic blood pressure ...

What happens to patients when nurses are short-staffed or work with a high nurse-to-patient ratio? Quality nursing care saves lives. When nurses are forced to work with high nurse-to-patient ratios, patients die, get infections, get injured, or get sent home too soon without adequate education about how to take care of their illness or injury.
