Magnetic resonance imaging (MRI) is a medical imaging technique used in radiology to form pictures of the anatomy and the physiological processes of the body in both health and disease. MRI scanners use strong magnetic fields, magnetic field gradients, and radio waves to generate images of the organs in the body. MRI does not involve X-rays or the use of ionizing radiation, which distinguishes ...

The British Journal of Medical Practitioners has adopted a “Continuous Publication” model from the beginning of year 2010 publishing articles online as soon as they are peer-reviewed and copy-edited.

No | British Journal of Medical Practitioners

The surface of the skin is divided into specific areas called dermatomes, which are derived from the cells of a somite. These cells differentiate into the following 3 regions: (1) myotome, which forms some of the skeletal muscle; (2) dermatome, which forms the connective tissues, including the dermis; and (3) sclerotome, which gives rise to the vertebrae.
