The abuse of methamphetamine—a potent and highly addictive stimulant—remains an extremely serious problem in the United States. According to data from the 2012 National Survey on Drug Use and Health (NSDUH), over 12 million people (4.7 percent of the population) have tried methamphetamine at least once. NSDUH also reports that approximately 1.2 million people used methamphetamine in the ...

There is a NEW drug on the market to control itching in dogs from allergies, called Apoquel. It has been launched with much fanfare...from Zoetis.. But be cautious, as its one small study showed serious side effects as it suppressed the immune system.

Apoquel Alert: Serious Side Effects of New Dog Allergy

A well-conducted Abdominal examination can reveal a great deal of information, however a poor abdominal GI examination reveal nothing. Read about Abdominal Examinations.

Abdominal Examination. GI Examination Information. Patient

Adrenaline, also known as epinephrine, is a hormone, neurotransmitter, and medication. Adrenaline is normally produced by both the adrenal glands and certain neurons. It plays an important role in the fight-or-flight response by increasing blood flow to muscles, output of the heart, pupil dilation response, and blood sugar level. It does this by binding to alpha and beta receptors.

Adrenaline - Wikipedia

The mini mental state examination (MMSE) is a commonly used set of questions for screening cognitive function []. This examination is not suitable for making a diagnosis but can be used to indicate the presence of cognitive impairment, such as in a person with suspected dementia or following a head injury []. The MMSE is far more sensitive in detecting cognitive

impairment than the use of ...
