Marine plastic pollution as a planetary boundary threat – The drifting piece in the sustainability puzzle

Marine plastic pollution as a planetary boundary threat

This article is about climate change and ecosystems. Future climate change is expected to affect particular ecosystems, including tundra, mangroves, coral reefs, and caves.

Climate change and ecosystems - Wikipedia

A biome / ˈb aɪ oʊ m / is a community of plants and animals that have common characteristics for the environment they exist in. They can be found over a range of continents. Biomes are distinct biological communities that have formed in response to a shared physical climate.

The researchers have gone on to study where these species live and how they affect the ocean's ecosystems. For years,

scientists have suspected that viruses alter the very chemistry of the world's oceans and may even influence the planet's climate.

Exposing the climate geoengineering cover-up. Excerpted from: Willful blindness – Wikipedia. Description “Willful blindness is a term used in law to describe a situation in which a person seeks to avoid civil or criminal liability for a wrongful act by intentionally keeping oneself unaware of facts that would render liability. Although the term was originally—and still is—used in legal ...
