MELANISM - WIKIPEDIA

## **melanin what makes black pdf**

Melanin (/ ˈ m ɛ l ə n ɪ n / ()); from Greek: μέλας melas, "black, dark") is a broad term for a group of natural pigments found in most organisms. Melanin is produced through a multistage chemical process known as melanogenesis, where the oxidation of the amino acid tyrosine, is followed by polymerization. The melanin pigments are produced in a specialized group of cells known as ...

The term melanism refers to black pigment and is derived from the Greek: μελανισμός. Melanism is a development of the dark-colored pigment melanin in the skin or its appendages.. Pseudo-melanism, also called abundism, is another variant of pigmentation, characterized by dark spots or enlarged stripes, which cover a large part of the body of the animal, making it appear melanistic.

Do you have freckles? If you don't, chances are you probably know someone who does. But what are they exactly? Freckles are natural and not harmful. Even though some people with freckles don't like them and want to get rid of them, they're certainly not a sign of any health problems. While anyone ...

MORE ENERGY & LESS DISEASE . with Vitamin C and MSM. Walter Last. Health authorities generally set such low limits for the recommended daily allowance (RDA) of vitamins and minerals that obvious deficiencies in most individuals are avoided but so that these nutrients do not become a threat to the pharmaceutical industry by preventing and curing diseases.
