The cell membrane (also known as the plasma membrane (PM) or cytoplasmic membrane, and historically referred to as the plasmalemma) is a biological membrane that separates the interior of all cells from the outside environment (the extracellular space) which protects the cell from its environment consisting of a lipid bilayer with embedded proteins. The cell membrane controls the movement of ...

Cell membrane - Wikipedia

Cell biology (also called cytology, from the Greek ?????, kytos, "vessel") is a branch of biology that studies the structure and function of the cell, which is the basic unit of life. Cell biology is concerned with the physiological properties, metabolic processes, signaling pathways, life cycle, chemical composition and interactions of the cell with their environment.

Calcium Flux. The evaluation of calcium flux is a long accepted, tried and true measure of cellular activity. Calcium flux can be used as a measurement for a host of cellular processes including neurotransmitter release, GPCR activity, voltage or ligand gated ion channels, and cardiomyocyte beat patterns, among many others. The FLIPR Tetra System is the drug discovery tool for evaluation of ...

FLIPR Tetra High-Throughput Cellular Screening System

In this survey text, directed at those not majoring in biology, we dispel the assumption that a little learning is a dangerous thing. We hope that by skimming the surface of a very deep subject, biology, we may inspire you to drink more deeply and make more informed choices relating to your health, the environment, politics, and the greatest subject that are all of us are entwined in, life itself.
