Pointers and Memory - Stanford CS Ed Library

Flash memory is an electronic (solid-state) non-volatile computer storage medium that can be electrically erased and reprogrammed.. Toshiba developed flash memory from EEPROM (electrically erasable programmable read-only memory) in the early 1980s and introduced it to the market in 1984. [citation needed] The two main types of flash memory are named after the NAND and NOR logic gates.

Flash memory - Wikipedia

Memory ordering describes the order of accesses to computer memory by a CPU. The term can refer either to the memory ordering generated by the compiler during compile time, or to the memory ordering generated by a CPU during runtime.. In modern microprocessors, memory ordering characterizes the CPU's ability to reorder memory operations - it is a type of out-of-order execution.
