Recovered-memory therapy (RMT) is a catch-all psychotherapy term for therapy using one or more method or technique for the purpose of recalling memories. It does not refer to a specific, recognized treatment method, but rather several controversial and/or unproven interviewing techniques, such as hypnosis and guided-imagery, and the use of sedative-hypnotic drugs, which are presently rarely ...

Memory protection is a way to control memory access rights on a computer, and is a part of most modern instruction set architectures and operating systems.The main purpose of memory protection is to prevent a process from accessing memory that has not been allocated to it. This prevents a bug or malware within a process from affecting other processes, or the operating system itself.
